

Cooking Math Project

You are going to host a group of 25 people for dinner. You can use a theme of the food if you want.

Your task is to

- 1) Decide on a multi-course meal with meat and non-meat options.
- 2) Find the recipes for each of the dishes in a cookbook.
- 3) Convert the recipes to serve 25.
 - Show the conversions for each ingredient.
- 4) Make an itemized shopping list.
- 5) Go to the store and price the shopping list.
- 6) Show the total for the party.

You may use a spreadsheet to help you do the math.

On your poster or slide-show show the recipes, prices, pictures of the dishes, total cost, stuff like that...
